14 TeV BSL associations including the Crab

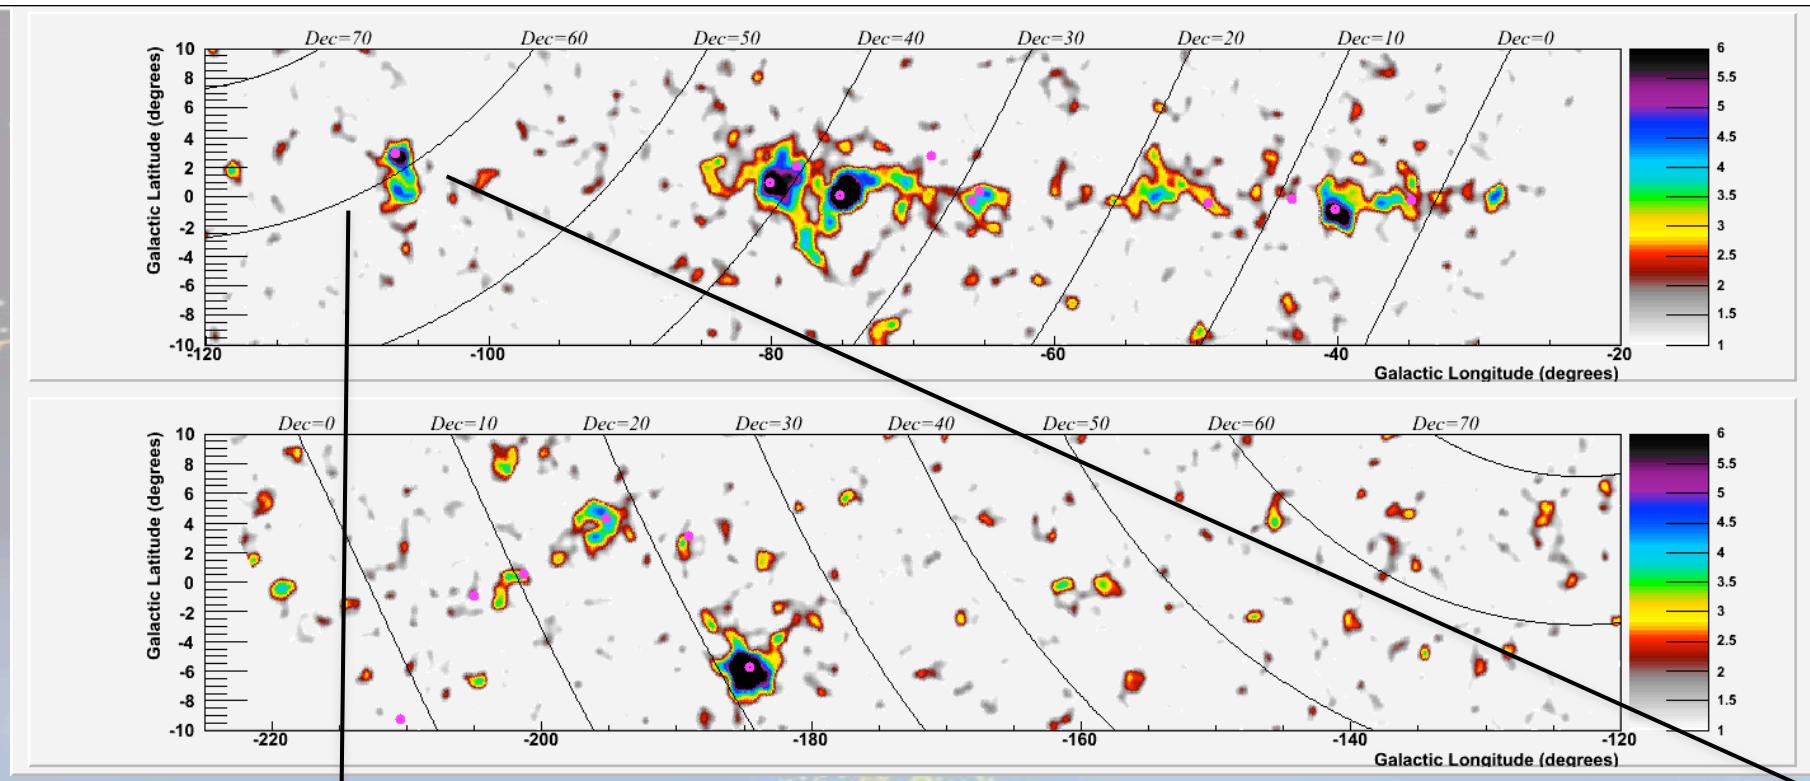

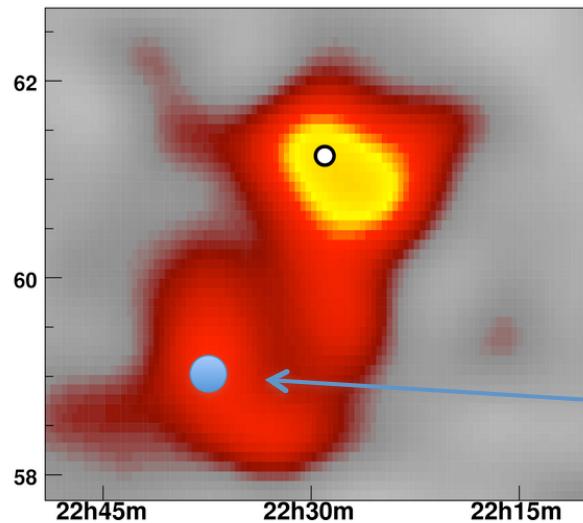

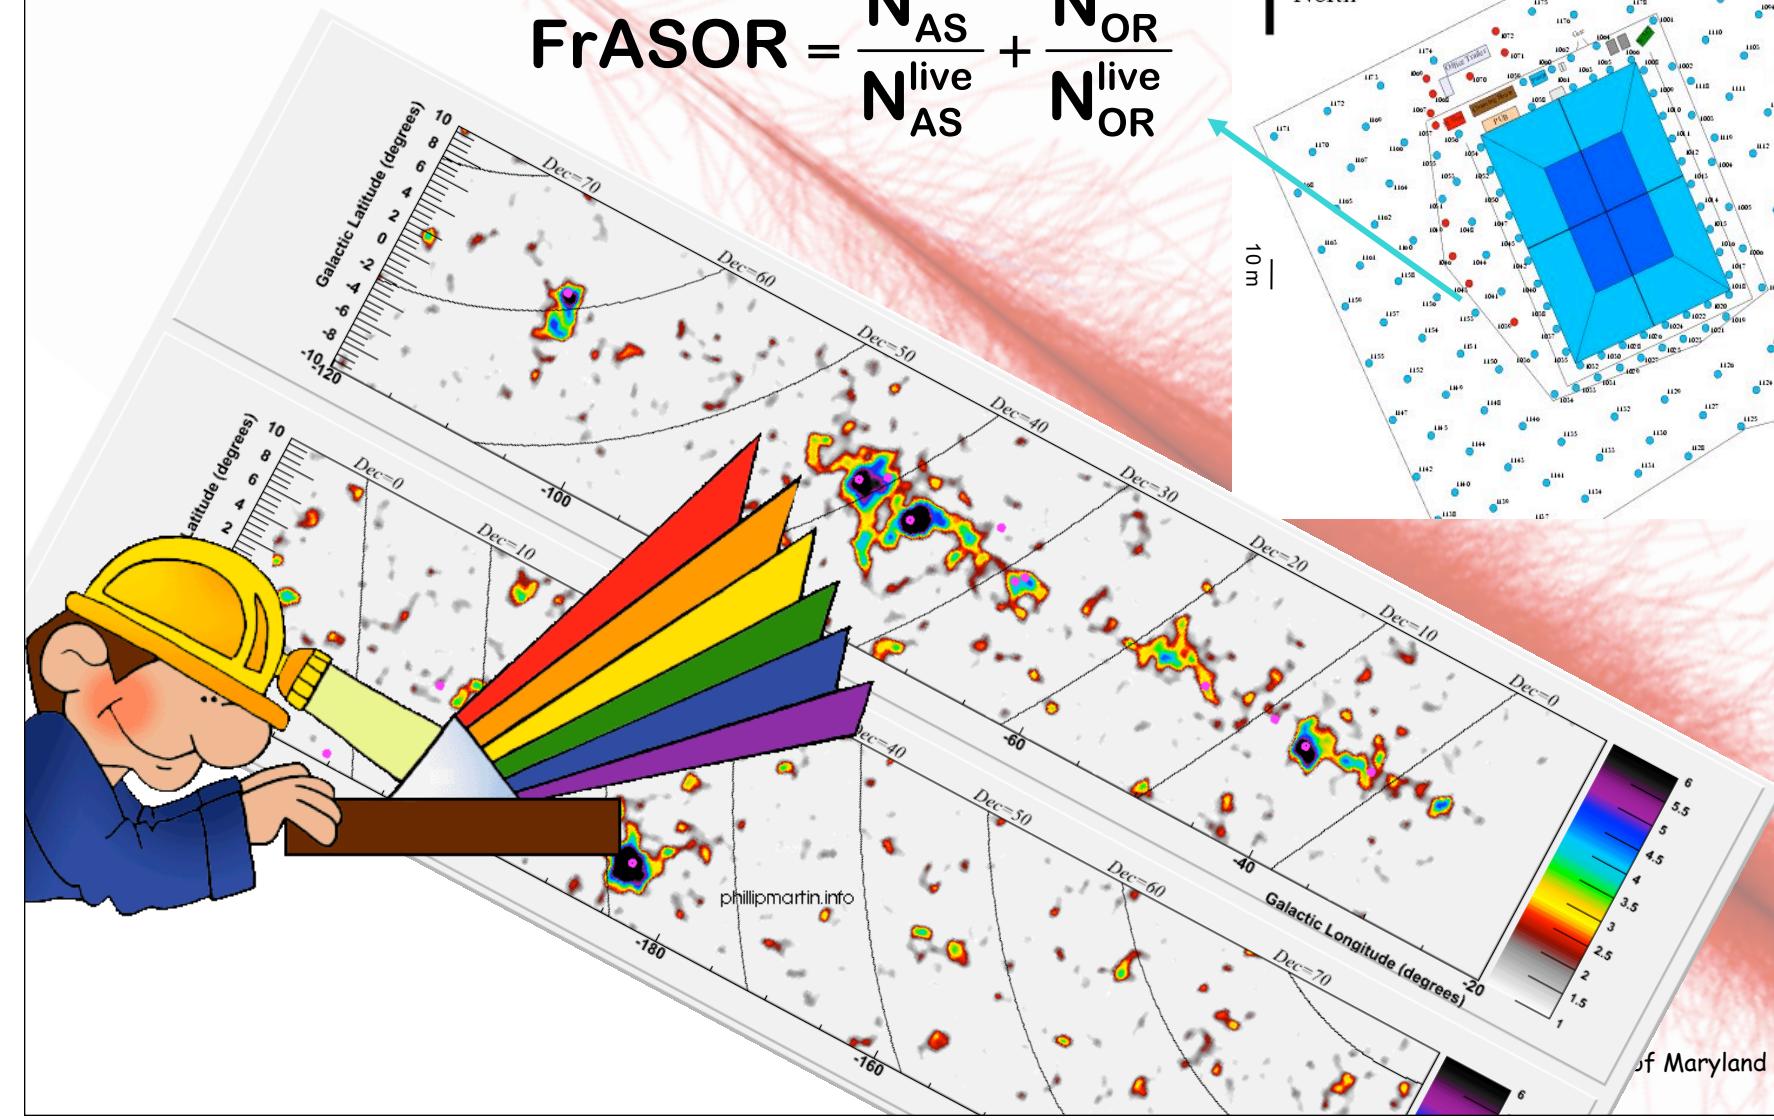

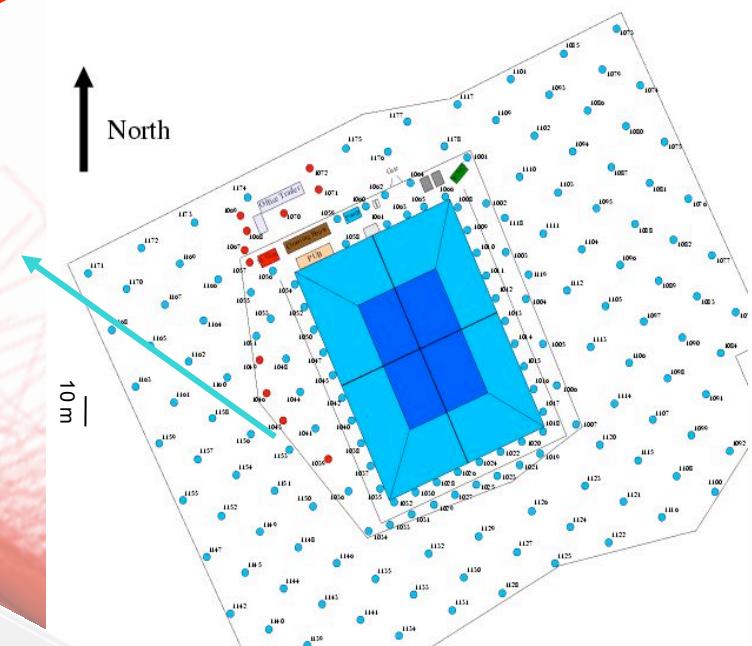

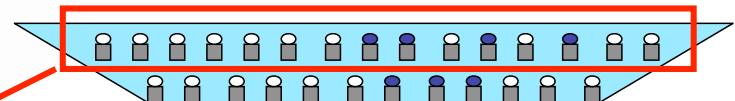

J2229.0+6114

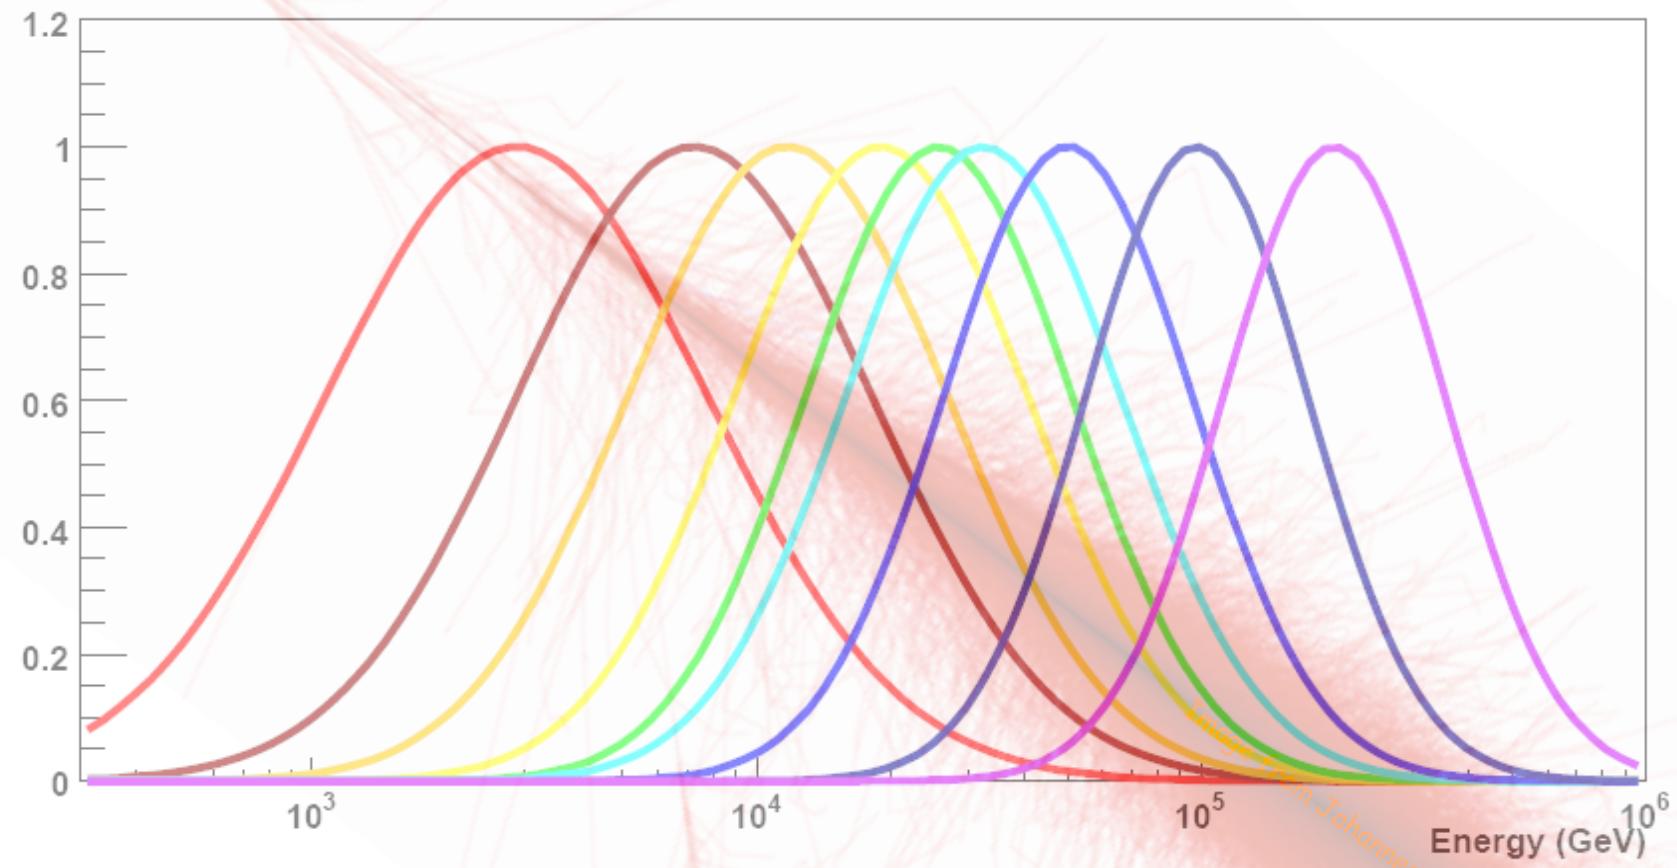

- “Boomerang” PWN
- Associated with radio pulsar J2229+6114
- Milagro detects a 6.6σ excess at the location of the Fermi source.
- Noted excess was very extended (4 deg)
- New Fermi pulsar (Science last Summer) located in the southern ‘tail’ with 4.7σ in Milagro data.
- VERITAS source

Introduction of Energy Parameter

$$\text{FrASOR} = \frac{N_{\text{AS}}^{\text{hit}}}{N_{\text{AS}}^{\text{live}}} + \frac{N_{\text{OR}}^{\text{hit}}}{N_{\text{OR}}^{\text{live}}}$$

Energy Dependence of FrASOR

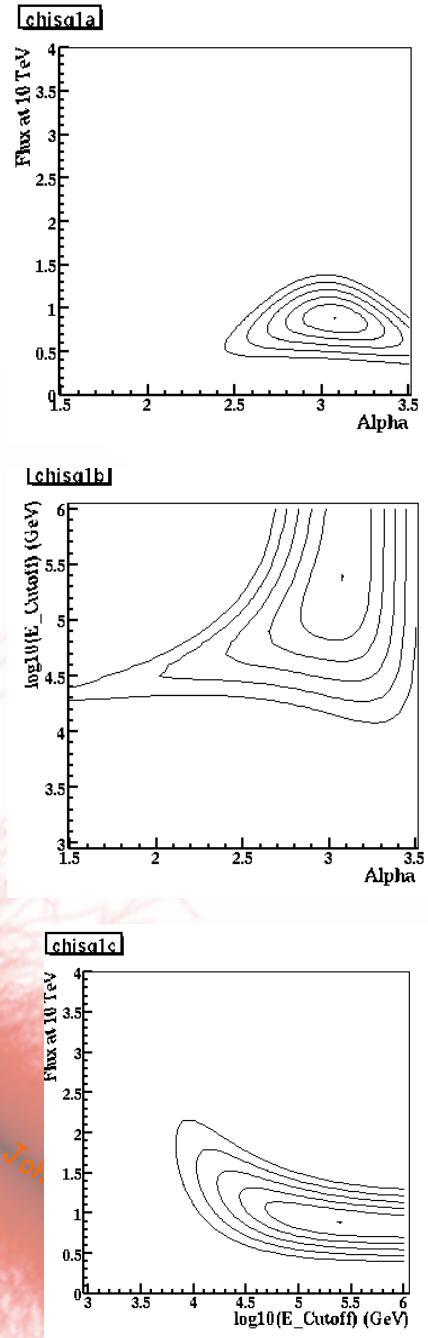

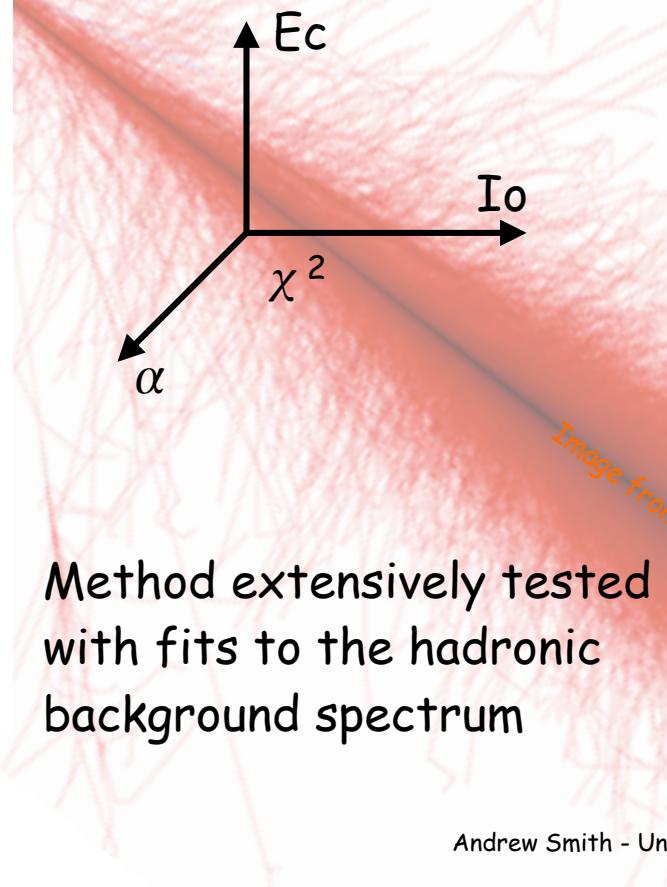

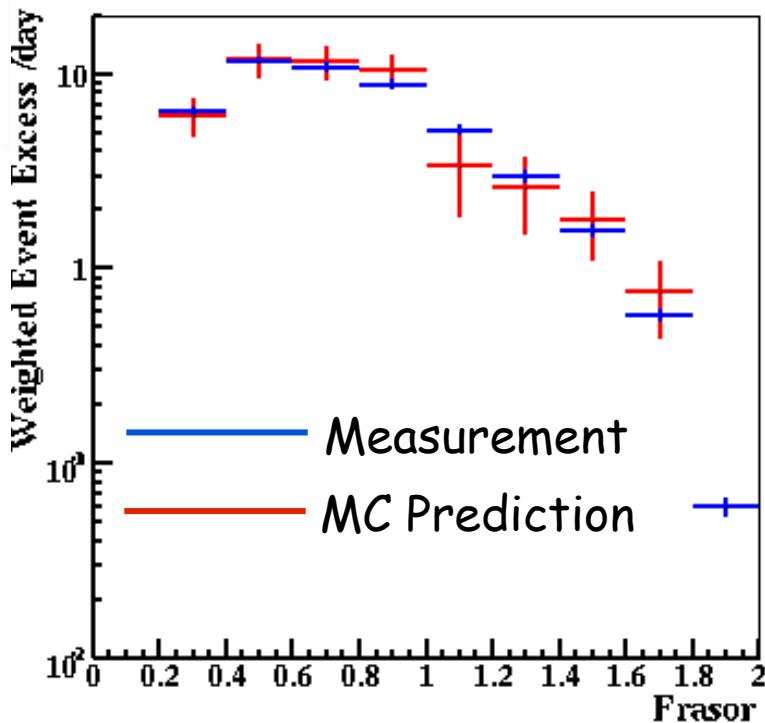

Fitting Procedure

$$\text{Flux} = I_0(E/\text{TeV})^{-\alpha} e^{-(E/E_c)}$$

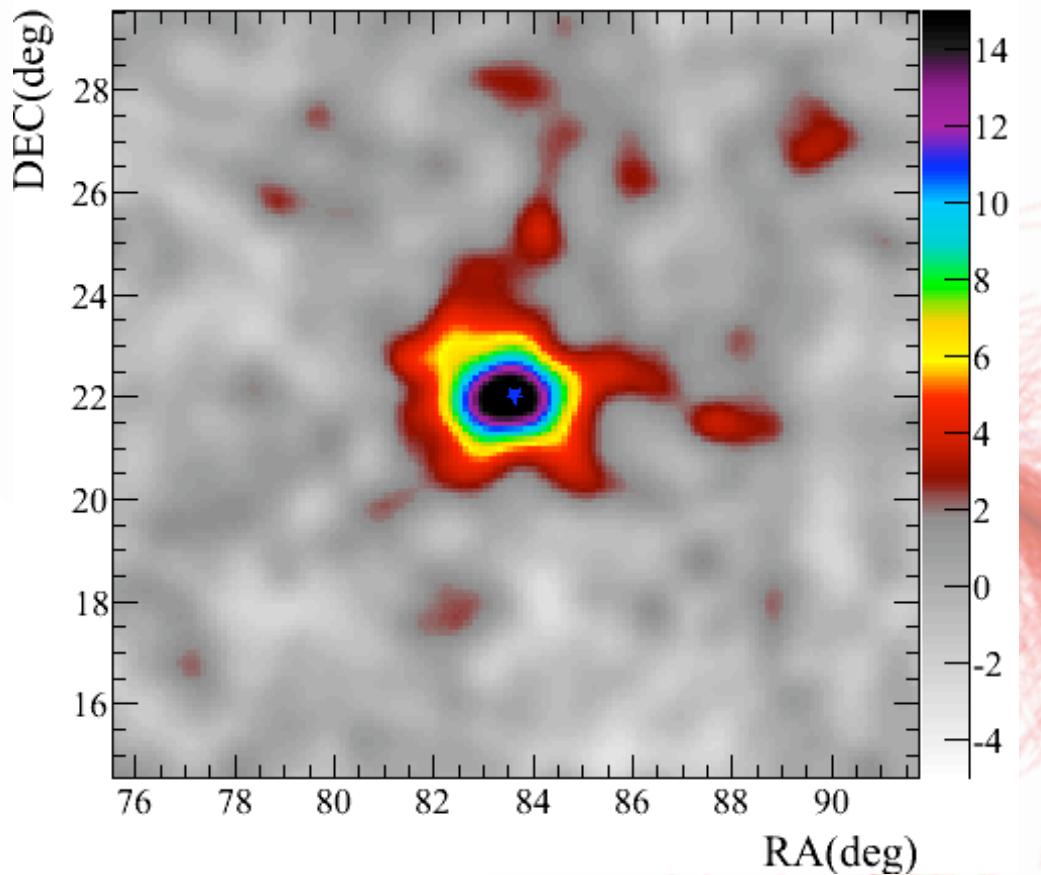

Perform fit in 'Frasor' space, not energy space.

$$\text{Minimize } \chi^2(I_0, \alpha, E_c) = \sum (Fr(I_0, \alpha, E_c) - Fr^{\text{measured}})^2 / \sigma^2$$
